Poker Gym: full brief for Grokbot, then ChatGPT

Prepared by Wren (Muse), Wednesday October 21, 2026, about 7:10 PM CT. All numbers below were pulled live from the connected Meta accounts on October 21, 2026. Windows and pull times are labeled beside the numbers because the platforms report different periods and the figures move during the day.

What this is and what Wes wants from you

Wes owns Poker Gym, a free casino game training site at playpokergym.com. The pitch on the profiles: learn the right play, one hand at a time. Free blackjack, video poker, baccarat, and Hold'em training. No signup. No real money.

The content engine is short strategy question videos. Each video poses one decision (a blackjack basic strategy spot, a Hold'em board reading spot, a baccarat bet choice), gives the correct play, and links to a free practice page on the site. The same videos are posted to Instagram Reels and to the Poker Gym Facebook Page, and the captions suggest the same content also runs on YouTube, because one caption on each platform carries a youtube link tag (see Finding 3).

Wes runs several AIs and has them check each other. You are receiving this brief because he wants your independent read. At the end there is a short list of questions. Answer those, critique Wren's suggestions in Section 7, and propose anything better that can be measured against the baselines in Sections 3 and 4. Wes will bring your answers back to Wren.

Section 1. Pages and connection status, verified October 21

1. Instagram: @playpokergym, https://www.instagram.com/playpokergym/ . Professional business account. Connected to Muse through Meta Accounts Center and verified pulling data.
2. Facebook Page: Poker Gym, https://www.facebook.com/profile.php?id=61595647135851 . Connected October 21. Wes linked his personal Facebook account, then accepted the Meta professional consent, after which the Pages data opened. Verified pulling data the same evening.
3. Website linked from the Instagram bio: https://playpokergym.com/ . The practice link used inside captions is https://playpokergym.com/web/?daily=1 with a channel tag and a content tag added per post.

Section 2. Instagram profile

Name: Poker Gym. Account type: business. Bio: "Learn the right play. One hand at a time. Free blackjack, video poker, baccarat and Hold'em training. No signup. No real money." Followers: 4. Following: 9. Posts: 6. All six posts are Reels.

Section 3. Instagram numbers, last 28 days, pulled October 21

Analytics service figures for the last 28 days:

1. Content views: 700. Prior period: 0.
2. Unique impressions (unique accounts reached): 615. Prior period: 0.
3. Profile visits: 9. Prior period: 0.
4. Follows: 4.
5. Engagement rate: returned null. Follower growth: returned null.

Metric card figures for 28 days, as returned by a second Instagram analytics endpoint:

1. Average likes: 1.3. Average comments: 0.
2. Best performing format: Reel. Most posted format: Reel.
3. Posts in window: 6. Posts per week: 1.5.
4. Audience activity peak is reported as 2 PM Pacific, which is 4 PM Central.

Data note: the per post list in Section 4 currently shows likes of 2, 2, 2, 2, 1, and 1, which averages higher than the metric card figure of 1.3. The two endpoints appear to update on different cycles. Both are reported here as returned, unreconciled.

Method limit: Instagram per post data from this connector carries likes and comments only. It does not return per post views, reach, saves, or shares. Views and reach exist only at account level.

Section 4. Instagram posts, all six, newest first

Times are the times returned by Instagram and are listed as returned.

1. October 21, 14:02. "When the board is the straight." Likes 2, comments 0. https://www.instagram.com/reel/DexU5dQkXis/
2. October 21, 06:07. "You have a straight. Do your 8s even play?" Likes 2, comments 0. https://www.instagram.com/reel/DeweQwUCsLB/
3. October 20, 14:03. "Blackjack basic strategy drill: hard 11." Likes 2, comments 0. https://www.instagram.com/reel/DeuwNCciQxW/
4. October 19, 14:04. "Blackjack basic strategy drill: hard 12." Likes 2, comments 0. https://www.instagram.com/reel/DesLV5TjBJL/

5. October 18, 14:02. "Ace Queen vs Ace Jack: Who Wins?" Likes 1, comments 0. https://www.instagram.com/reel/DepmgapAFOC/
6. October 17, 14:40. "Banker, Player, or Tie: Which Bet Loses Least?" Likes 1, comments 0. https://www.instagram.com/reel/DenGHwZjmFO/

Comments are zero on every post. That is total, not an average rounding artifact.

Section 5. Facebook Page numbers

Account insights were pulled for two windows, the last 7 days (October 14 to October 20) and the last 28 days (September 23 to October 20), as of October 21, 7:02 PM CT. Both windows returned the same displayed values, word for word:

1. follower_count (snapshot): 0.
2. views: "429 vs 0 in prior period."
3. unique_viewers: "390 vs 0 in prior period."
4. engagement_including_clicks: "0 vs 0 in prior period."
5. profile_visits: "0 vs 0 in prior period."
6. new_followers: "0 vs 0 in prior period."
7. unfollowers: "0 vs 0 in prior period."

Method note: the Facebook connector returned these metrics as display text with a null numeric value, so they are quoted exactly and no arithmetic has been done on them. Window figures must not be mixed with the lifetime per post figures in Section 6.

Section 6. Facebook posts, all six in the 28 day list, newest first

All metrics below are lifetime, as of October 21, 7:06 PM CT. Every post returned engagements 0, engagements including clicks 0, clicks 0, link clicks 0, saves 0, reactions 0, shares 0, and comment count 0. Only views and unique viewers vary, so only those are listed per post.

1. Video, October 21, 4:02 PM CT. "When the board is the straight." Views 182. Unique viewers 133.
2. Video, October 21, 8:03 AM CT. "You have a straight. Do your 8s even play?" Views 251. Unique viewers 235.
3. Video, October 20, 4:02 PM CT. "Hard 11: double or hit?" Views 206. Unique viewers 197.
4. Video, October 19, 4:02 PM CT. "Hard 12: hit or stand?" Views 223. Unique viewers 200.
5. Video, October 18, 4:02 PM CT. "Ace Queen vs Ace Jack: Who Wins?" Views 2. Unique viewers 2.
6. Post (not a video), October 18, 2:11 PM CT. No caption text returned. Views 3. Unique viewers 2.

Section 7. Findings and Wren's suggestions

Finding 1. Discovery works, engagement does not. Facebook shows 390 unique viewers against 0 followers, and Instagram shows 615 unique accounts reached against 4 followers. Nearly all viewing is by people who do not follow either page. Yet engagement is zero everywhere it is measured: zero comments on all six Instagram Reels, and zero reactions, comments, shares, saves, and link clicks on every Facebook post.

Wren suggestion 1. Give viewers one action inside the video. These are question shaped videos. End each one by asking the question out loud and on screen, make the first line of the caption the question, and add a follow ask built around the daily hand idea. Right now a viewer can watch, agree, and leave without touching anything.

Finding 2. A distribution anomaly on October 18. The first Facebook video, October 18, got 2 lifetime views. Every video from October 19 onward got between 182 and 251 lifetime views, with no change in format visible from the data. The October 18 non video post also got only 3 views. Something changed after the first day. The data does not say what.

Wren suggestion 2. Do not chase the anomaly yet. One more week of daily numbers will show whether the 182 to 251 range is the stable baseline.

Finding 3. Channel tags in the practice links are wrong on the newest morning posts. Each caption links to the practice page with a ref tag that should name the channel. The October 21, 4:02 PM posts are correct: ref=facebook on Facebook, ref=reels on Instagram. The October 21 morning posts on both platforms carry ref=youtube, plus a content tag reading new-hook, while every earlier post carries its own platform tag. The morning posts appear to reuse the YouTube caption without swapping the tag. Until this is fixed, site analytics will credit YouTube for traffic that Facebook and Instagram produced.

Wren suggestion 3. Fix the tag swap in whatever process reuses captions across platforms. One tag per platform, every post, checked before publishing.

Finding 4. Posting pattern. Facebook got one video a day at 4:02 PM CT from October 18 to October 21, plus one extra video at 8:03 AM CT on October 21. Instagram shows the same videos. Instagram reports the audience activity peak at 4 PM Central, matching the main slot. The single morning video currently has the highest Facebook lifetime views at 251, but it has also had more hours to collect them than the same day afternoon video, so the comparison is not clean.

Wren suggestion 4. Hold posting times steady for one week while the daily report collects clean per post numbers, then judge timing on a full week rather than on two posts.

Section 8. What is now running, so your advice can be measured

Wes killed every prior automated routine on October 21. Exactly one routine exists now: a Poker Gym daily stat report at about 9:47 AM CT, first run Thursday October 22, 2026. It pulls both pages each morning, reports followers, views, unique viewers, profile visits, interactions, and new posts, and compares follower count and post count against a stored baseline snapshot from October 21 (Instagram followers 4, Facebook follower_count 0, plus the window figures in Sections 3 and 5). Any experiment you propose should state which of these daily numbers it is supposed to move, and by when.

Section 9. Questions for you

1. Critique Wren's four suggestions in Section 7. Which are right, which are weak, and what did Wren miss?
2. Engagement is zero while views are in the hundreds. What are the two or three highest leverage fixes for question style training videos specifically, in priority order?
3. Follow conversion is near zero on both pages (4 followers on Instagram, 0 on Facebook, against hundreds of unique viewers). What converts a viewer of one hand into a follower, and what profile changes support that? A profile audit of both pages has been offered and not yet run, so include what it should check.
4. Is the one video a day cadence, plus experiments like the October 21 morning extra, the right shape for a brand new page, or should the volume change?
5. Propose a two week experiment plan. Each experiment needs the change, the daily report metric it should move (Section 8), and the result that would kill it.
